The investment-grade bond market exhibited resilience week-over-week as investor concerns regarding a hard landing in China drove volatility in global equity markets

- Amid the equity sell-off, the S&P 500 lost nearly 6.7% while the Barclays US Aggregate bond index fell just 0.36%¹.

- Short-dated Treasury bonds, most sensitive to changes in monetary policy, posted gains week-over-week as recent market turmoil reduces the probability that the Federal Reserve will raise rates in September.
  - The 5-year Treasury rate fell to 1.37% on Monday, the lowest level since late April¹.

- Despite weaker global economic data and falling energy prices, the US economy continued to show positive trends – the Commerce Department revised second quarter gross domestic product (GDP) upward to 3.7% from 2.3%¹.

- In the corporate market, primary issuance fell sharply given the weak tone in the market.
  - Investment-grade supply totaled less than $50 billion month-to-date versus a monthly average of over $100 million in 2015, and investors expect no new issuance through Labor Day².
  - Low corporate supply provided support for secondary spreads, but China concerns continued to weigh on risk markets.
    - Investment-grade spreads widened 5bps to 167bps, the highest level since September 2012³.
  - Agency mortgage-backed securities (MBS) moved slightly wider in sympathy with corporates, given a lack of demand at current yield levels.
  - Puerto Rico’s water utility delayed the $750 million bond sale planned for last week given volatile market conditions¹.
