Yields on long duration credit are hovering near 5%, a level that could be a psychological tipping point for some investors.

The Bloomberg Barclays Long Credit Index yielded 4.98% as of October month-end, driven by a 5.37% yield on long BBB-rated bonds.

Long credit yields have reached 5% only twice over the last seven years, and each time was driven by a distinct, negative catalyst.

In 2013, the Taper Tantrum sent yields soaring, and long credit yields broke through 5% for a short period of about six months.

The most recent period of 5% long credit yields was during late 2015 to early 2016, as the energy sector was under extreme pressure and downgrades were spiking; long energy spreads surpassed 500bps, a far cry from the 199bps spread as of October month-end.
