• Market sentiment rebounded this week, after the release of dovish Federal Reserve (Fed) comments and news of an extended window for US-Mexico trade negotiations
  • Fed Chair Jerome Powell noted that the Fed would “act as appropriate to sustain the expansion,” leading to expectations of easing amid concerns surrounding slowing global growth
  • The market-implied probability of a rate cut by the end of the year increased to over 98%
• Front-end yields fell while longer yields increased, as investors priced in a higher likelihood of lower rates and a potential pickup in long-term inflation
  • The difference between the 2-year and the 10-year Treasury yields reached 28bps, the steepest level since 2018
• Investment-grade corporate issuance totaled over $22 billion and surpassed the higher end of estimates of $20 billion, with issuers taking advantage of improved investor demand
• Corporate spreads remained unchanged at 128bps, however, sector-level spread movements were bifurcated; Financial and Industrial spreads each tightened, while Utilities widened
  • Utilities struggled to participate in the recovering market tone, as corporate spreads stabilized and investors rotated into more riskier sectors following a volatile May
• Mortgage-backed securities (MBS) underperformed Corporates and Treasuries, as lower mortgage rates increased prepayment risk
• Longer-dated municipals outperformed Treasuries; however, heavy issuance may provide a headwind going forward; 30-day visible supply of $14 billion is the highest total since October
